CALL FOR PROPOSALS 2017

The **CIEM (International Center for Mathematical Meetings)** is an initiative of the Universidad de Cantabria whose goal is to promote quality mathematical research, be it in its more basic or its more applied and computational aspects, with special emphasis to multidisciplinary ventures.

The **CIEM** is now seeking activity proposals for the year 2017. All individuals and groups interested in organizing a workshop, meeting, advanced course, etc. can ask for the **CIEM** to allocate that event in its annual program. The candidate events must meet the following requirements:

- They have to be thematically related to mathematics or close fields (computer science, theoretical physics,...) and their quality be guaranteed by a scientific and/or organizing committee.
- Their length should preferably be one week (Monday to Friday), but three day meetings and, exceptionally, two-week meetings are also allowed.

The **CIEM** offers its resources (lecture room for 100 people, smaller meeting rooms, internet wifi, computer room, etc) plus logistic and monetary support for the organization, accommodation, etc.

Proposals should be sent by email to ciem@unican.es preferably before **July 31**.

The application letter should contain a brief description of the event, previous meetings if any, organizing committee, expected number of attendees, expected external financing, financial support asked from **CIEM** and any other information that supports the quality and feasibility of the project.
